                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (bases 1 to 162409)

**NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

** This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 was identified following database searching for human ACAT-related sequences and use of PCR and RACE to obtain full-length sequences. An isolated nucleic acid (see ANV1534) for human ARGP-2 (see ANW3407) was also identified. Also claimed are host vector systems for production of ARGP polypeptides, and transgenic non-human mammals. ARGP-1 and ARGP-2 nucleic acids can be used to diagnose or treat a subject who has an imbalance in sterol levels due to a defect in sterol esterification. A claimed oligonucleotide capable of sterification. A claimed oligonucleotide capable of sterification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This isolated nucleic acid molecule encodes human acylcoenzyme A:cholesterol acyltransferase II (see AAW43406), or ACAT related gene product 1 (ARGP-1), that is expressed at high levels in intestine and is a candidate for sterol esterification in these tissues. It was identified following database searching for human ACAT-related sequences and use of PCR and RACE to obtain full-length sequences.
                                                                                                                                                                          Venkatramesh M,

                                                                                                                                                                                                                                                                                                                                                                                                                                        Acyl-CoA:cholesterol acyltransferase; ACAT; ACAT-like protein; sterol; ester; triacylglycerol; fatty acyl-CoA; lipid composition; plant cell; diacylglycerol acyltransferase; DACAT; triglyceride; cancer; diabetes; cardiopulmonary disease; heart fallure; atherosclerosis; adipocytosis; leukaemia; skin carcinoma; fibroblastoma; metabolic disorder; obesity; abnormal lipid metabolism; abnormal fat absorption;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sterol brassicastanol. Oil obtained from the seeds can be used in food and pharmaceutical compositions to lower levels of low density lipoprotein cholesterol in blood serum. ACAT enzymes can be used in the present invention to produce elevated levels of phytosterol and/or phytostanol esters.
                                                                                                                                                                                                                                                                                                      04-JUN-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of human acyl CoA:cholesterol acyltransferases (ACAT) full-length DNA. Sterol O-acyltransferases such as ACAT catalyse the formation of cholesterol esters from cholesterol and long chain fatty acids. Recombinant constructs of the invention are used to alter the biosynthesis and accumulation of sterols and tocopherols in transgenic plants. Seeds of such

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            homeostasis. The present sequence is the coding sequence of human ACAT Related Gene Product 1 (ARGP1). The enzyme encoded by the present sequence is a diacylglycerol acyltransferase (DGAT). ARGP1 does not esterify cholesterol. It is thought therefore that ARGP1 participates in the Coenzyme A-dependent acylation of substrate(s) other than cholesterol e.g. diacylglycerol. Also, ARGP1 has a predicted diacylglycerol binding motif, suggesting that it may perform the last acylation in triglyceride biosynthesis. ARGP1 gene and protein are useful for treating a subject who has an imbalance in triglyceride levels due to a defect in esterification of diglycerol, via gene therapy. Particularly, ARGP1 is useful for treating hypertriglyceridaemia, hyperlipidaemia, atheroselerosis, heart disease, obesity or other diseases associated with habby a contraction of the contraction of diglaceridaemia.
                                            This is the nucleotide sequence of a nucleic acid of the human cell line SH-SY5Y, used in the method of the invention involving the use of novel apoptosis-related DNAs and proteins. The inventions can be used as diagnostic reagents for apoptosis e.g. (monoclonal) antibodies for the protein, as a reagent in immunohistological staining, as apoptosis inhibitors. It can also be used for treatment of apoptosis-related
                                                                                                                                                            Claim 1; Page 38;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; SH-SY5Y; apoptosis; antibody; immunohistological staining; inhibition; ds.

The present invention relates to oligonucleotides based on nucleotide CC Sequences obtained from both wild-type tubercle bacilli (wtTB) that are CC susceptible to a drug and mutant-type tubercle bacilli (mtTB) that are CC resistant to a drug. The drugs used in the present invention are CC rifampicin (RFP), streptomycin (SM), Kanamycin (KM), isoniazid (INH) and CC resistance to INH; the prob gene is responsible for resistance to RFP; the CC resistance to INH; the katG gene is responsible for resistance to INH; the waste gene is responsible for resistance to INH; the waste gene is responsible for resistance to INH; the control of the control of the control of the sequence of tubercle bacilli (TB) responsible for resistance and cc primers used to generate the probes. The present sequence is tubercle bacilli (TB) responsible for resistance and cc present invention can be used to enable the differentiation of drug cresistance and the determination of infection with tubercle bacilli

CC The present sequence is that of the Mycobacterium tuberculosis CC ambB (ethambutol resistance) gene (bp7741-8040). Amplification CC and cycle sequencing primers (see AAA4963-62) are used for the CC detection and analysis of antibiotic resistance-associated mutations CC pr (isoniazid), mabA (isoniazid), rpsL/s12 (streptomycin), l65/rrs. CC (streptomycin) embB (ethambutol), prest, s12 (streptomycin), l65/rrs. CC (ciprofloxacin) and 23S (azithromycin) genes of M. tuberculosis. CC Characterization of M. tuberculosis present in a sputum sample. CC without prior amplification, to detect the presence of M. CC Cuberculosis, and if present to evaluate the procedure, with or CC tuberculosis, and if present to evaluate the procedure is tuberculosis is detected, a second sequencing procedure is CC performed on the sample to evaluate additional genes for the presence of antibiotic-inducing mutations. CC presence of antibiotic resistance-inducing mutations. Genotypic CC entibiotic treatment options.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PD

                                                                                                                                                                                                                                                                                       The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopolesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, activin/inhibin activity, cathiring activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polynucleotides encoding human secreted proteins - derived e.g. human blood, kidney, foetal lung, placenta, testes, brain ovary, pituitary, retina and colon cDNA libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; secreted protein; expressed sequence tag; EST; haematopoiesis; tissue growth; activin; inhibin; chemotaxis; chemokinesis; haemostatic; receptor; ligand; thrombolytic; anti-inflammatory; cadherin; anti-tumour;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        comprise at least one cytokine-encoding DNA sequence. The expression of cytokines in mammals can up-regulate immune responses to the immunegens. The cytokine is selected from interleukins (IL), colony stimulating factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The BHY-2 based vector or recombinant virus can be used as vaccines. They can be used for preventing or treating a mucosal disease in a subject, e.g. ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly mastitis in cows or breast cancers in humans. They can also be used for preventing or treating a stress-induced disease. The present sequence represents a BHY-2 thymidine kinase partial gene sequence, BHY-2UK cloned for use in the invention. This differs from the previously published sequence BHY-2NT by having adenine at position 727 (full length)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    interleukin; colony stimulating factor; CSF; interferon; IFN; TNF;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              comprise at least one cytokine-encoding DNA sequence. The expression of cytokines in mammals can up-regulate immune responses to the immunogens. The cytokine is selected from interleukins (IL), colony stimulating factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The BHV-2 based vector or recombinant virus can be used as vaccines. They can be used for preventing or treating a mucosal disease in a subject, e.g. ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly mastitis in cows or breast cancers in humans. They can also be used for preventing or treating a stress-induced disease. The present sequence represents the partial sequence of a previously published BHV-2 thymidine kinase, BHV-2NY-1. The cloned BHV-2VK sequence (AAX91501) of the invention differs from the present sequence BHV-2NY-1 by having adenine at position 727 (full length) instead of guanine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 559 BP; 123 A; 178 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention provides bovine herpes virus-2 (BHV-2) based vectors that comprise at least one cytokine-encoding DNA sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   There are a total of six relevant genes in a 7900 bp region that cause E. coll cells to produce GGPP and the carotenoids phytoene through zeaxanthin diglucoside, which is the final prod. identified in the carotenoid pathway contd. in plasmid pARC376 (contg. a ca. 13 kb chromosomal DNA fragment isolated by Perry et al., J. Bacteriol., 168:607 (1986). The genes for geranyl-peranyl pyrophosphate (GGPP) synthase, phytoene synthase, phytoene dehydrogenase-4H, lycopene cyclase, beta-carotene hydroxylase, and zeaxanthin glycosylase are represented in AAQ13716, AAQ13718, AAQ13719, AAQ13722, AAQ13724 and AAQ13726 respectively.

The native sequence (AAQ13722) was genetically engineered for use in expression in yeast. At the 5' end of the gene, the native amino acid residue, Arg, was originally encoded by an AGG codon thas been changed to a AGG codon, while retaining its coding for the AGG amino acid residue. Arg, was originally encoded by an AGG codon that was changed to a CGC codon, while retaining its coding for the AGG manno acid residue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Manipulation of the present sequence, the lycopene cyclase coding sequence, by in frame linkage to the chloroplast transit peptide (AAW01124) of the tobacco ribulose bis-phosphate carboxylase-oxygenase gene can lead to increased production of total carotenoids in the chloroplast of transformed plants as compared to native, non-transformed plants of the same type. Beta-carotene is an effective and apparently harmless food colourant and is also in the pathway for biological synthesis of further C40 carotenoids such as zeaxanthin and zeaxanthin diglucoside. Other enzymes involved in the carotenoid biosynthesis pathway include geranylgeranyl pyrophosphate (AAW01113), phytoene synthase (W01121) and phytoene dehydrogenase-4H (AAW01123).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Increasing prodm. of total carotenoid(s) in a higher plant - transforming with vector encoding chloroplast transit peptid operably linked to the Erwinia herbicola lycopene cyclase st

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is a recombinant lycopene cyclase coding sequence. The approx. 1142 bp SphI-BamHI fragment present in the plasmid pARC1509 (ATCC 40850) is used to transform plants in order to increase the level of carotenoids produced by plants. Manipulation of it by in frame linkage to the chloroplast transit peptide (AAW01124) of the tobacco ribulose bis-phosphate carboxylase-oxygenase gene can lead to increased production of total carotenoids in the chloroplast of transformed plants as compared to native, non-transformed plants of the same type. Beta-carotene is an effective and apparently harmless food colourant and the colou
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Increasing prodn. of total carotenoid(s) in a higher plant - by transforming with vector encoding chloroplast transit peptide operably linked to the Erwinia herbicola lycopene cyclase structural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  is also in the pathway for biological synthesis of further C40 carotenoids such as zeaxanthin and zeaxanthin diglucoside. Other enzymes involved in the carotenoid biosynthesis pathway include geranylegranyl pyrophosphate (AAW01119), phytoene synthase (WO1121) and phytoene dehydrogenase-4H (AAW01123).

                                                                                                                               A novel DNA molecule has been isolated which encodes an Erwinia herbicola lycopene cyclase enzyme that converts lycopene to beta-carotene The DNA molecule comprises at least 1125 bp and is present in the plasmids pARC147, pARC1509, pARC1510 and pARC1520. The present sequence represents the structural gene for lycopene cyclase. The new DNA molecule can be used to produce the recombinant enzyme and transgenic organisms, e.g. yearsts or plants, with increased beta-carotene levels. Beta-carotene is used as a colourant in margarine and butter and as an intermediate for vitamin A, and may prevent cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21-JUL-1993;
